4
5 #Reference for script name: https://github.com/Amoursol/dynamoPython/blob/master/dynamoAPI/dynamoAPICurrentGraphName.py
6 #Thanks to John Pierson for sharing the code for Dynamo file data
7
8 #Add CLR and Dynamo services for its API
9 import clr
10 clr.AddReference('DynamoRevitDS')
11 import Dynamo
12 from System import Environment
13
14 #Add document manager from Revit services
15 clr.AddReference('RevitServices')
16 import RevitServices
17 from RevitServices.Persistence import DocumentManager
18
19 # access to the current Dynamo instance and workspace
20 DynamoCurrent = Dynamo.Applications.DynamoRevit()
21 ActiveScript = DynamoCurrent.RevitDynamoModel.CurrentWorkspace
22 DynamoVersion = DynamoCurrent.RevitDynamoModel.Version
23
24 # ensure version 2.X, get name
25 if DynamoVersion.StartsWith("2."):
26     ScriptName = ActiveScript.Name + ".dyn"
27 else:
28     ScriptName = "Version not supported"
29
30 # get system user name
31 UserName = Environment.UserName
32
33 # get active document name and path
```

Let's get into
the example!

Making sheets

*We want to update sun
settings*

So we need to inspect the
SunAndShadowType class
