Modelling Revit Stair Finishes and Nosings
48 views • 1 day ago
Stair modelling is hard enough as it is in Revit - let alone managing separate applied finishes and nosing strips! This tutorial aims to show an efficient method by which to achieve both elements o...

Aligning Revit models to DWG Surveys
114 views • 3 days ago
This video addresses a very common point of confusion in Autodesk Revit - how to align your model to a 2D DWG Survey file. Shared Coordinates will also be covered in a separate video at a later dat...

aussie BIM guru

A background network diagram consisting of numerous grey dots (nodes) connected by thin grey lines (edges), forming a complex web-like structure that fills the right side of the slide.

Demo starts halfway in

aussie BIM guru

What are Shared Coordinates

A system in **Revit** that can be used to establish each models **relation** to one another in **coordinates**.

You may have heard of them

aussie BIM guru

A background network diagram consisting of numerous grey dots (nodes) connected by thin grey lines (edges), forming a complex web-like structure that fills the right side of the slide.

Why use them?

aussie BIM guru

aussie BIM guru

aussie BIM guru

Common symptoms

Horizontal misalignment

Vertical misalignment

All using different **origins**

Starting in **isolation**

Irony of the situation

The survey(s) are **shared!**

aussie BIM guru

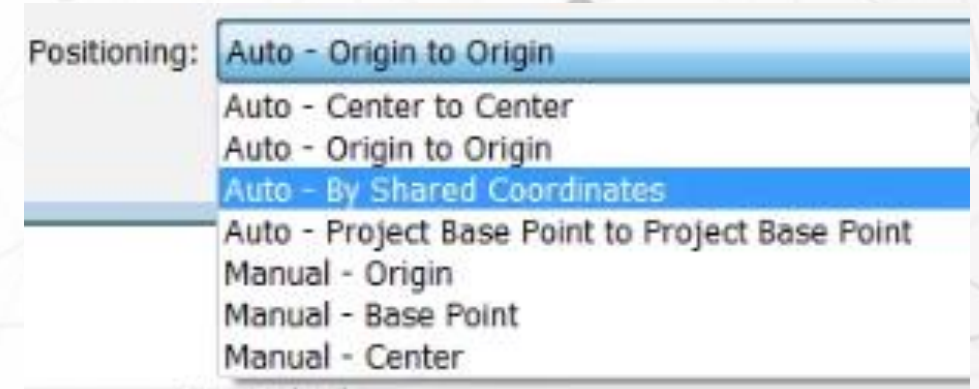

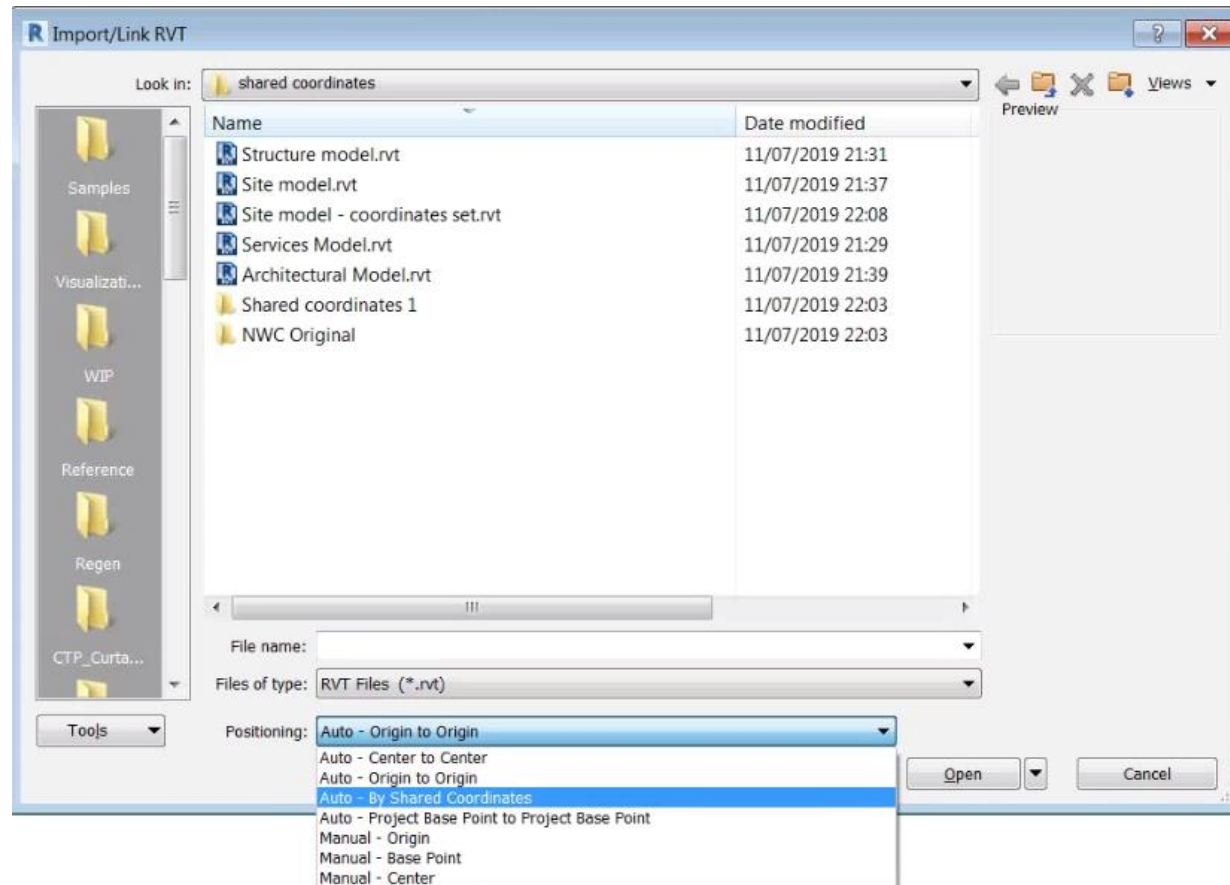

Solution

The **coordinates** should be too!

aussie BIM guru

'Brainless' Positioning

aussie BIM guru

Origins?

If origins **don't match**
this **won't really** be an issue.

In either case...

Mark/track it!!!

aussie BIM guru

Common Reason

This way
on day 1

Super important
business meetings
on Day 10

Waiting
for our
fee first

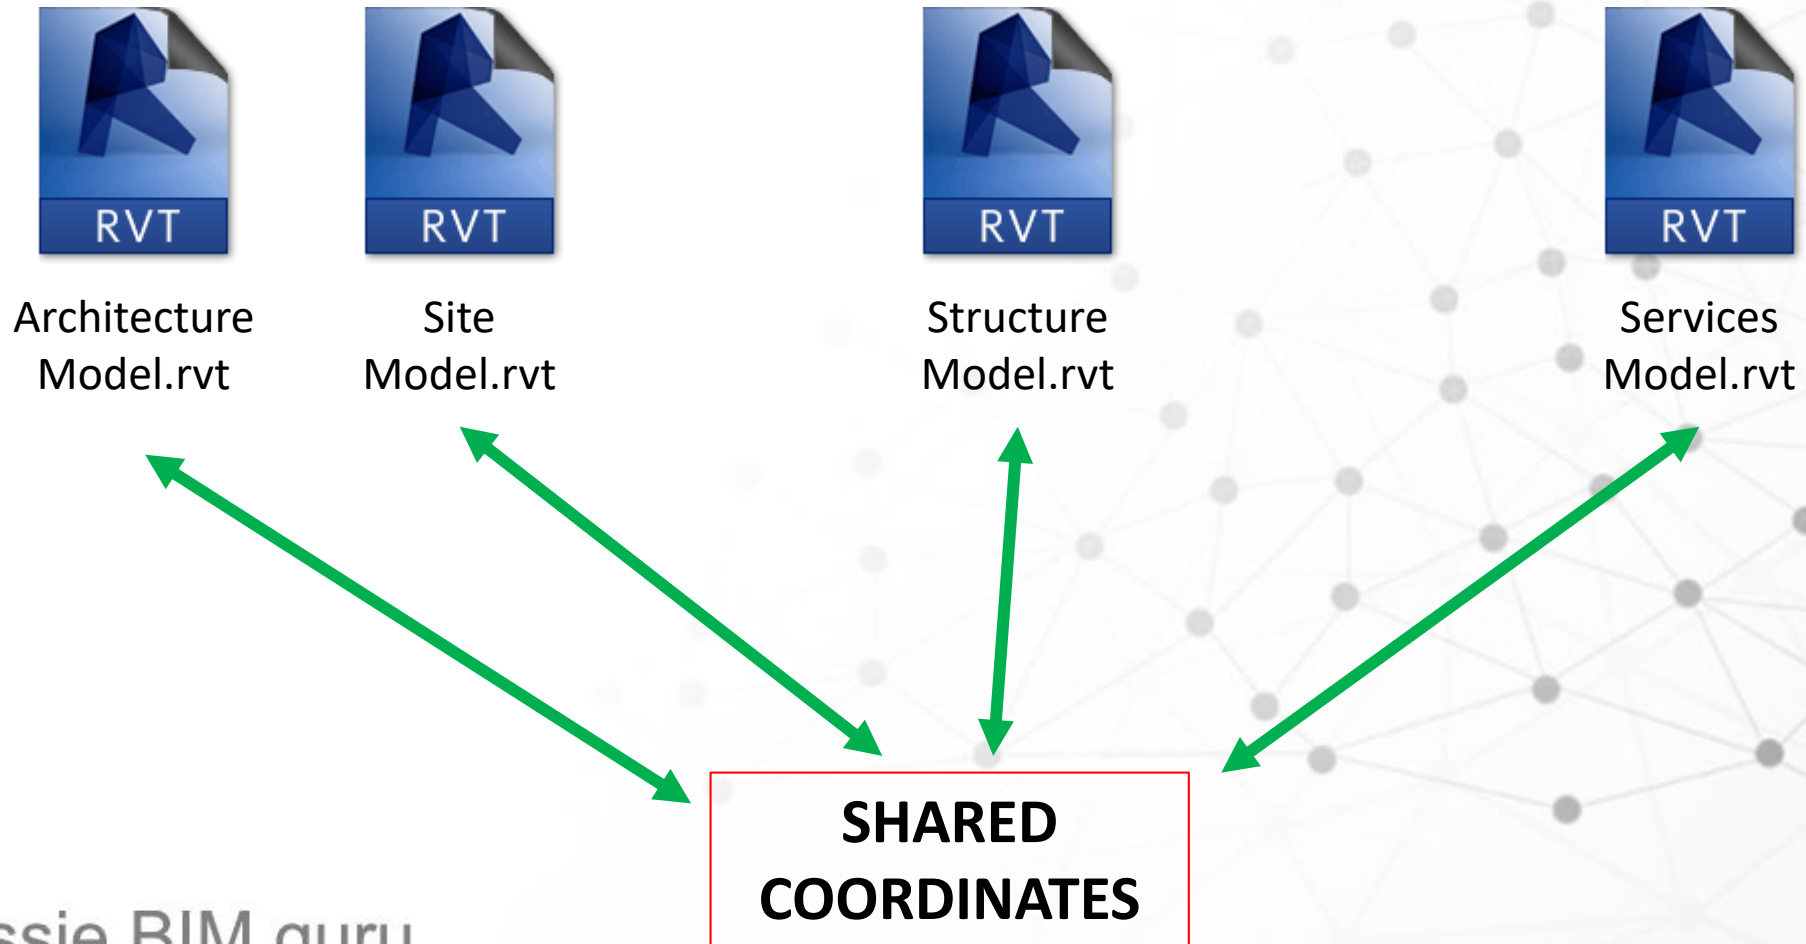

Won't
share our
template

That way
on day 3

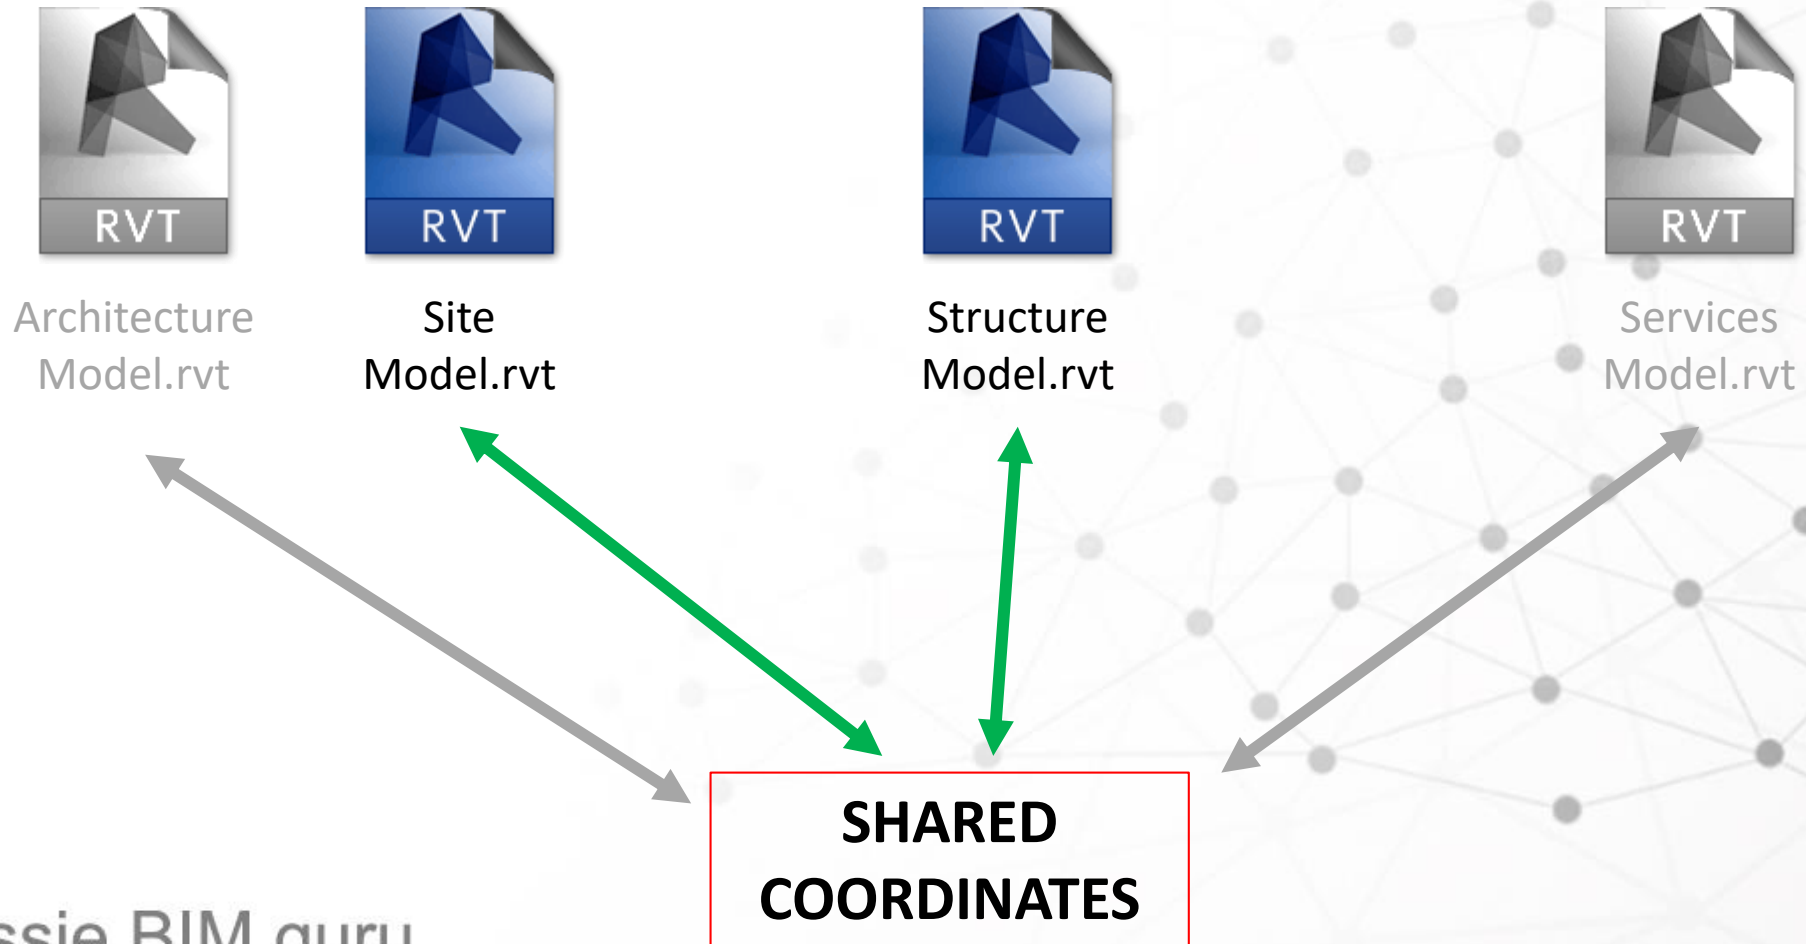

aussie BIM guru

A Single Source

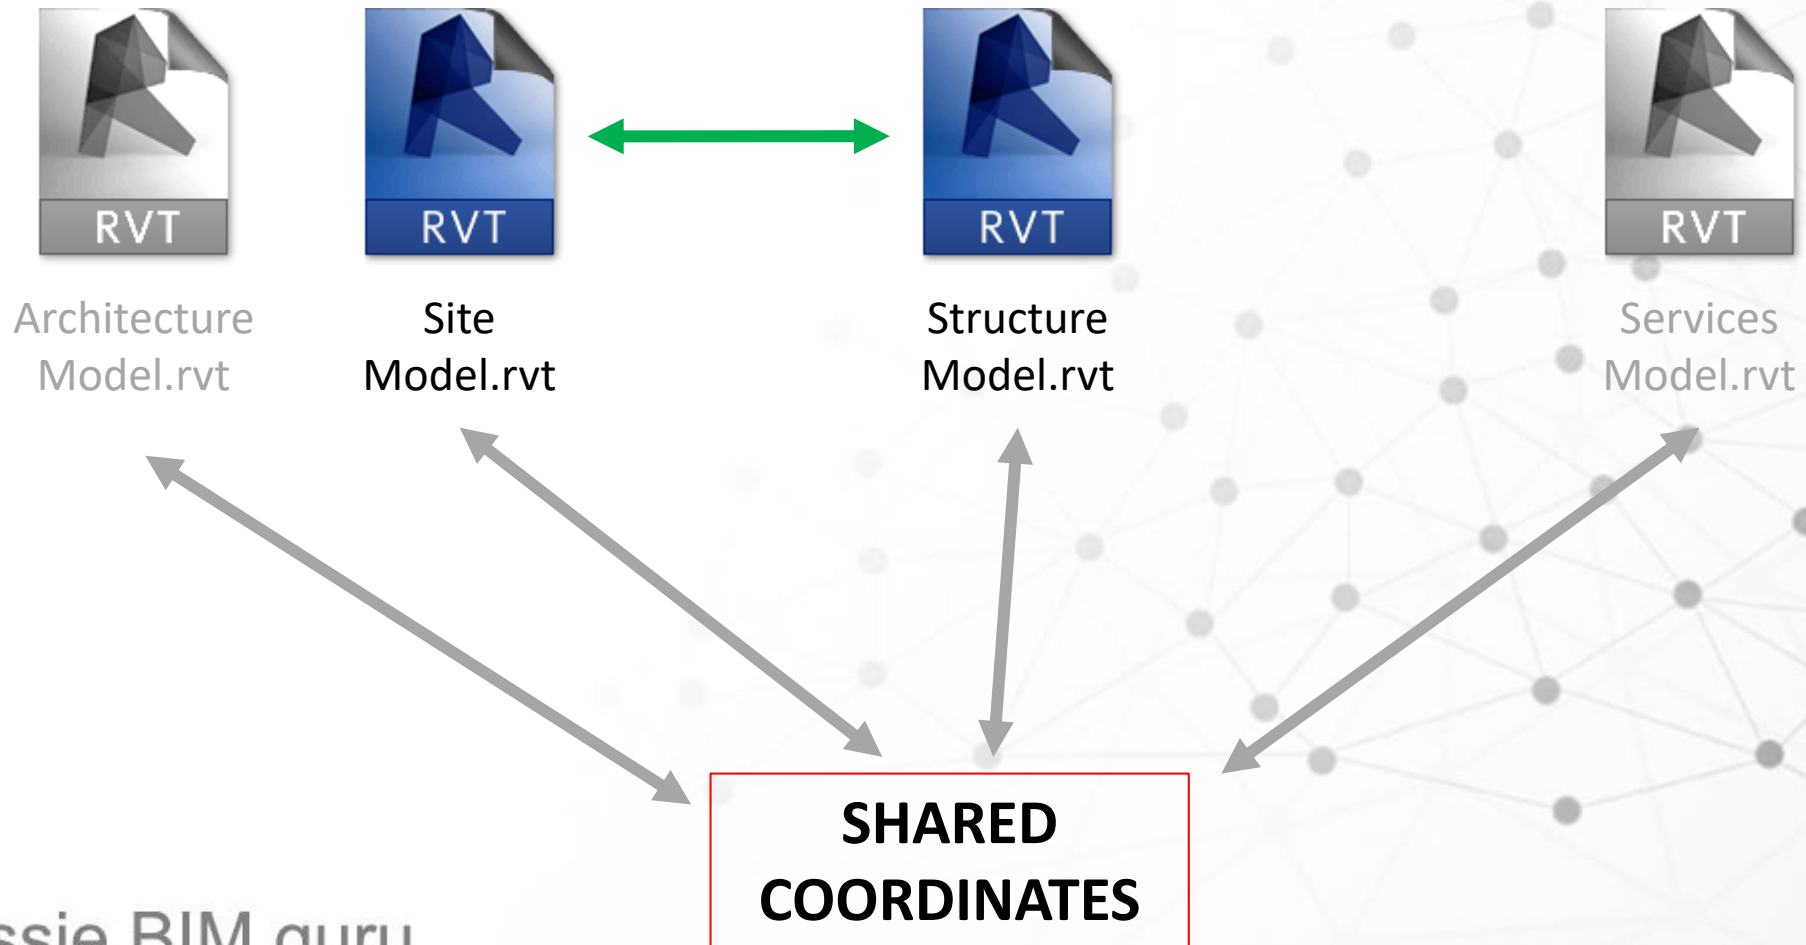

Connects the Models

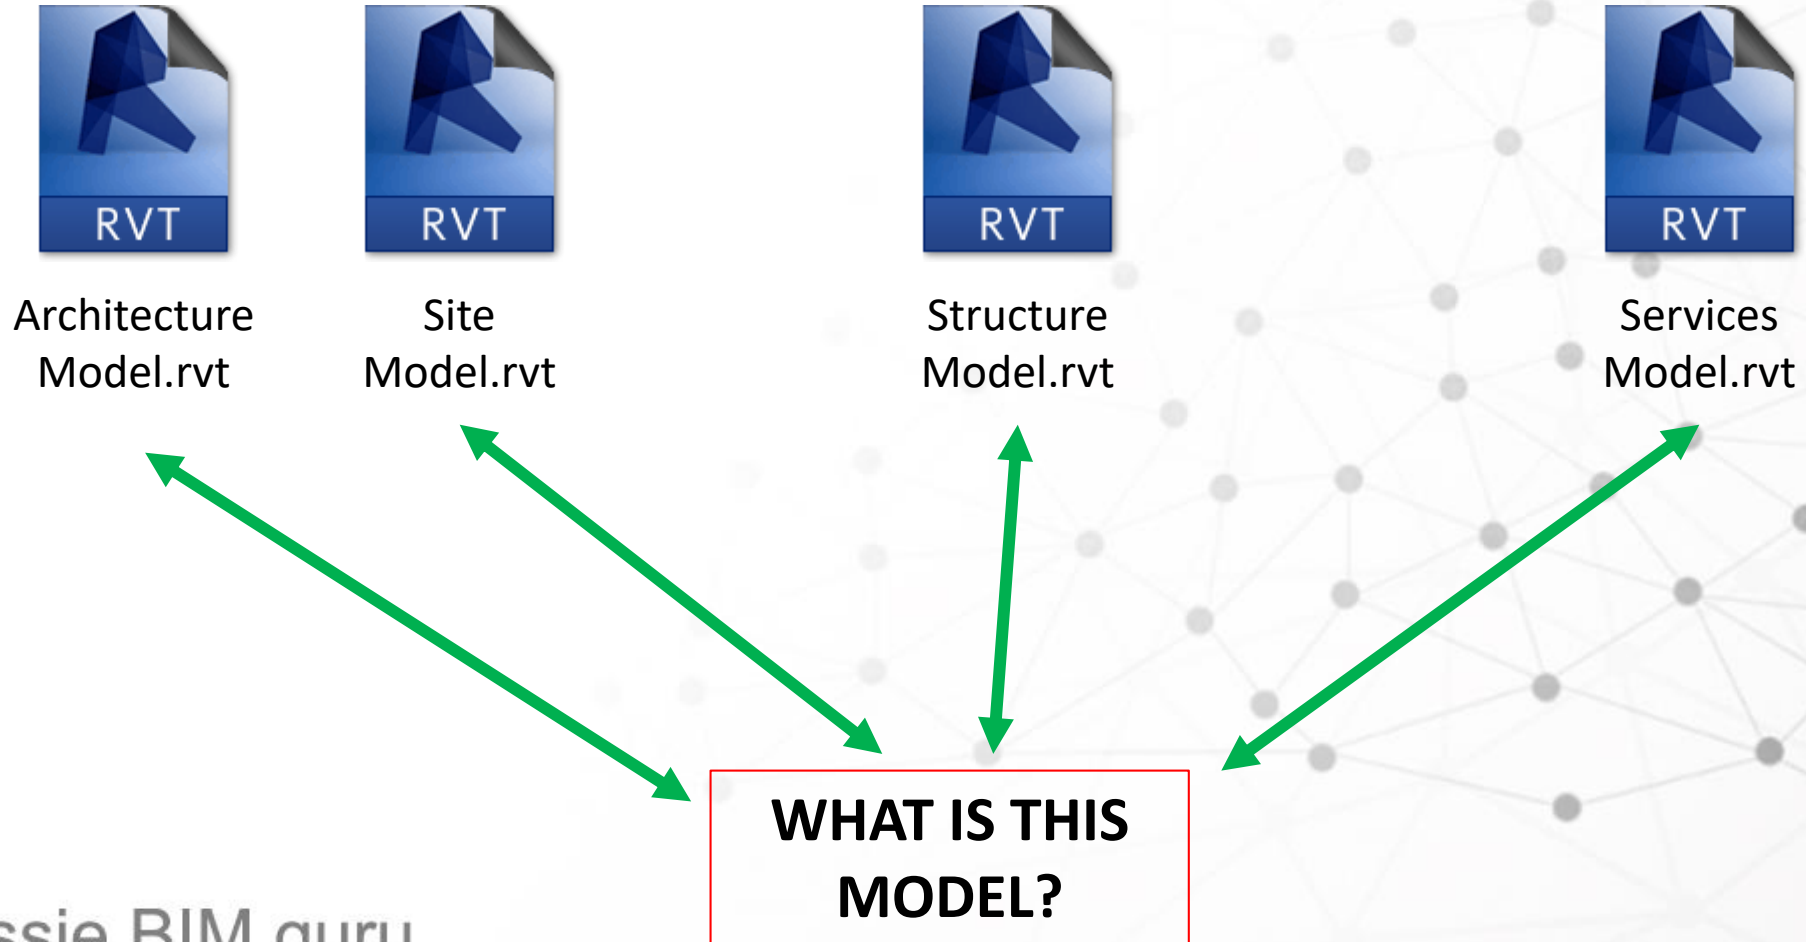

aussie BIM guru

Together

aussie BIM guru

But How?

Never: DWG?

It is **possible** to use a DWG survey to acquire shared coordinates

But it is also very confusing...
Any CAD Manager's even around?

If everything must be origin linked back to the original Survey, **maybe this is necessary**

aussie BIM guru

Option 1: Architecture

Usually the first model created

Often used as a starting point for other disciplines before survey is established

Usually starting point of grids and levels

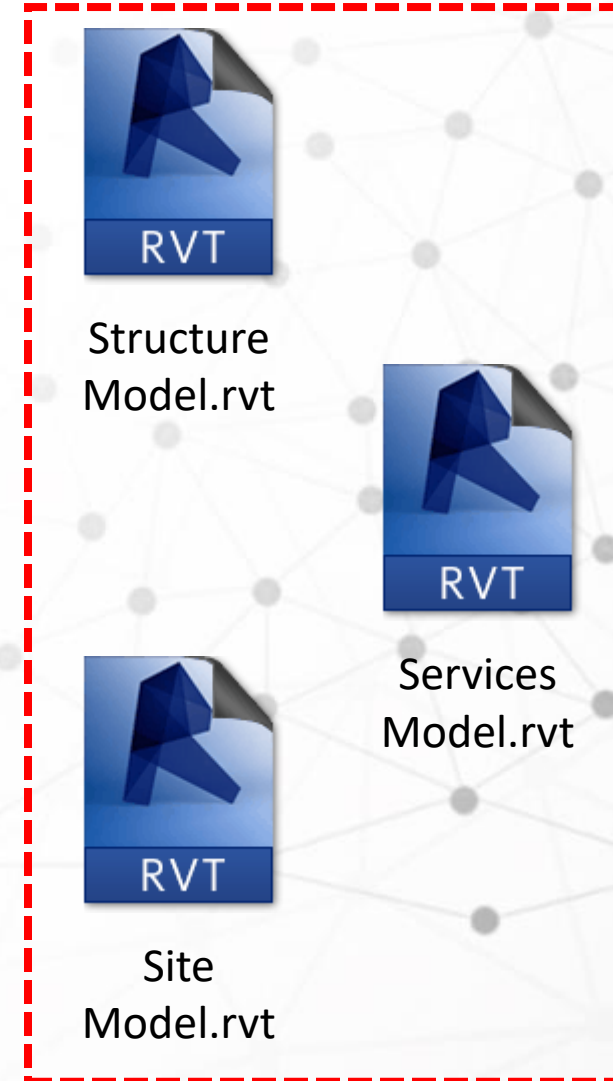

aussie BIM guru

Establish shared
coordinates

Publish shared
coordinates

Acquire shared
coordinates

aussie BIM guru

Option 1: Architecture

But....

What if the building **moves**?

What if **more buildings** enter the project scope?

What if this building is **removed** from the project scope?

aussie BIM guru

Option 2: The Site

The world cannot be moved!

Usually a 'cleaned' version of the building model anyway.

Usually where the survey will end up being verified.

Holds property boundaries usually.

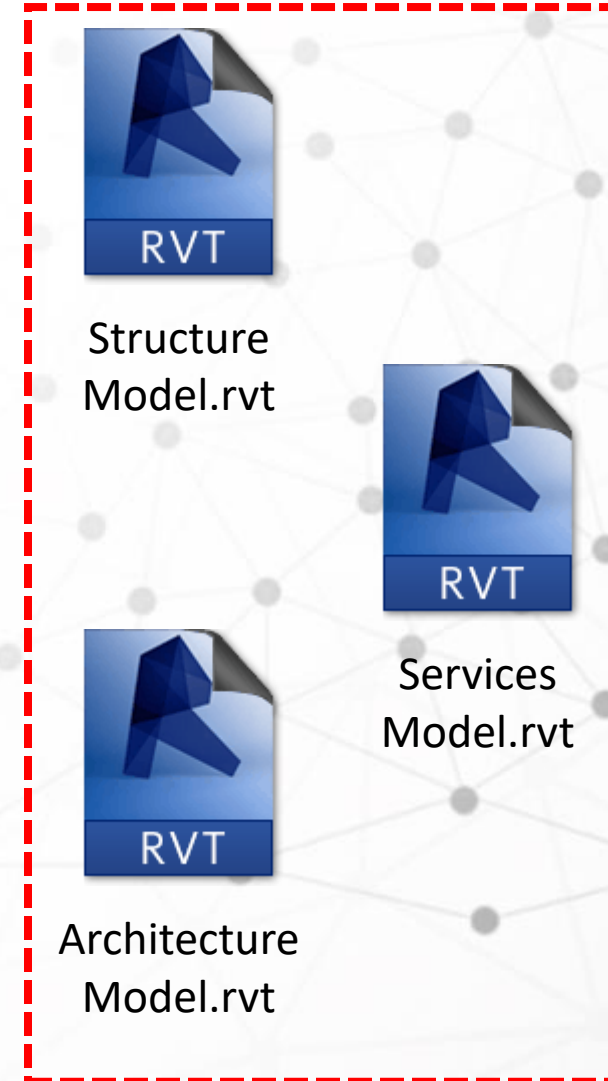

aussie BIM guru

Establish shared
coordinates

Publish shared
coordinates

Acquire shared
coordinates

aussie BIM guru

Option 2: The Site

But....

What if a **new site** is chosen?

What if the survey is **wrong** or a new one is provided?

These challenges are manageable with **team communication**!

aussie BIM guru

Ideally: Control Model

Contains grids, levels and coordinates only. Low impact on overall project.

Rarely changed and low file size (easy to exchange).

Maybe too much for **small projects**.

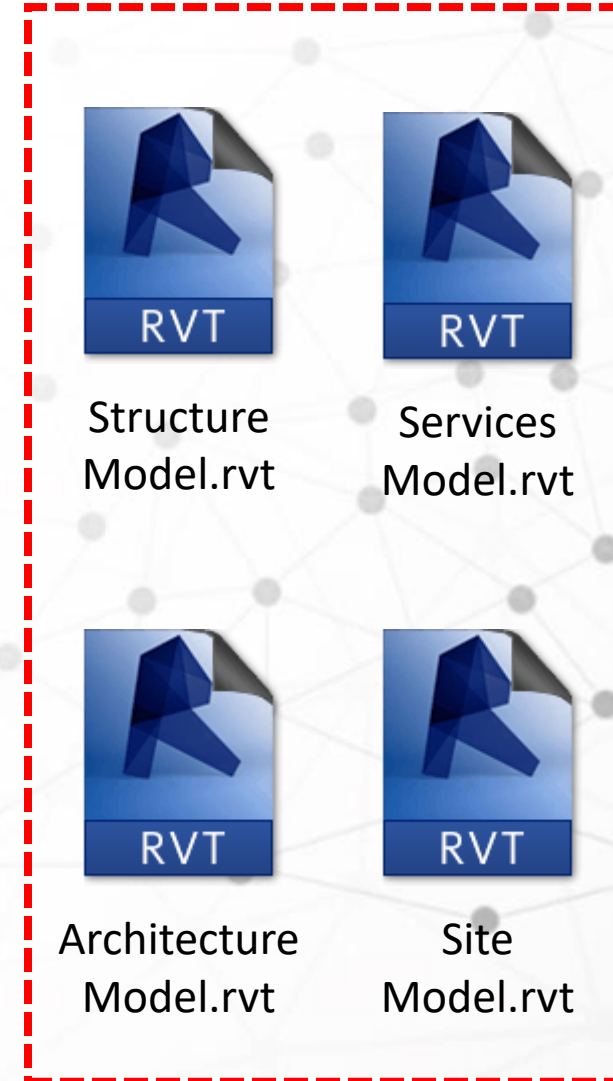

aussie BIM guru

Establish shared
coordinates

Publish shared
coordinates

Acquire shared
coordinates

aussie BIM guru

Anyway... demonstration time!

aussie BIM guru

Scenario

1. Architect has a building model first, begins without survey
2. **Shares** the model with structure
3. Structure begins modelling with **origin to origin** positioning
4. Services engineer begins modelling in **isolation**

Coordination time!

Architect

Structure

aussie BIM guru

Even Worse...

1. Architect receives survey
2. Creates **site** model, aligns that to survey
3. Aligns to survey, **models in isolation**

Coordination time!

Client

Project
Manager

aussie BIM guru

Who fixes this mess?

BIM Lead Consultant

aussie BIM guru

Let's fix this

Using **Shared Coordinates**

aussie BIM guru

Everyone's happy!

Project
Manager
