BIM Something presso Hell

11h ...

Hi Gavin, I actually made something to do this when you put out the original PowerBi video. I'm more than happy to send it to you and close the circleahaha. I uploaded it on my GitHub. Take a look maybe it can be useful. Thank you man for the inspiration, love what you're doing.

# SYNOPTIC DESIGNER FOR POWER BI

Synoptic Designer is the companion tool of **Synoptic Panel**, a certified custom visual for Microsoft Power BI created by OKViz.

## Modify svg file for Power BI

**SYNOPTIC DESIGNER FOR POWER BI**

Synoptic Designer is the companion tool of Synoptic Panel by SQLBI, grand prize winner of the Power BI Best Visual contest. It allows you to draw custom areas over any map image and export it as SVG file to Power BI. Then, through our Synoptic Panel, you will be able to color the different areas based on your data.

Watch a [step-by-step video](#) to get more information.

**SYNOPTIC PANEL BY SQLBI**

Get the latest version  
v0.4.8 - released on Dec 16, 2015

# What I spotted

- SVG objects are in the form of Polygons
- SVG data can be read and rewritten!

# Eureka!

# Segmentation of polygons

Basic polygons are made of straight edges, with start/end points.

# Segmentation of polygons

Polygons do not typically support arcs, splines and enclosed regions.

# SVG (Shape) file format

```
<g>
<polygon id="2936478" points="66250, 47498.0000000001 66250, 47223.0000000001 66250, 46948.0000000001

Area

# What we will do (Part 1)

1. Take rooms from a Revit model by level
2. Obtain their boundary
3. Segment any curved edges
4. Create polygons
5. Write an SVG file

# What we will do (Part 2)

1. Splice element Id's into the SVG polygons
2. Write room data to Excel
3. Use Excel as our Power BI data source
4. Download synoptic panel visual
5. Connect our SVG visual to our data
